# Queuing Networks Modelling Lab

Virtual Labs - IIT Delhi

This document tells how the experiments reach the end user through various hosts and interfaces.

The virtual lab is hosted on two servers:

1. IIT Delhi Main Web Server : It can be easily accessed at the address: http://web.iitd.ac.in/~dharmar/virtuallab/
2. IIT Delhi Virtual Lab Server: It is a database of all the virtual labs made at IIT Delhi. The virtual lab can be accessed by going to www.iitd.vlab.co.in and then selecting Queueing Networks Modelling Lab under the head Electronics & Communications.

The first website has the complete website and is independent of any other network. That is all the files that are used in virtual lab are accessible from this server.

User ` IIT Delhi Server

The second website however is just an interface. If one selects a specific experiment for simulation on that website , he will be automatically redirected to the first web server where he can perform simulations.

User   iitd.vlab server   IIT Delhi Server
(for simulations)
